Students accepted in this program must, at

screen prior to official acceptance in the program and again during the second year of the program. Failure to provide the required results by the due date or the receipt of anything other than a passing score will make a student ineligible for enrollment. Students will also be required to provide evidence details regarding the background check,

urine drug screen, and other requirements are given to students after conditional acceptance into the program is granted.

A previous conviction may disqualify a graduate from the certification process. Call the American Registry of Radiologic Technologists at 651-687-0048 for additional information.

Employers, teachers, coaches, scout leaders, co-workers, church officials, and longtime friends are great resources. Family members are not acceptable references.

Acceptance is not guaranteed. Every year there are more qualified applicants than there are positions in the program. Students not accepted into the program may continue to pursue the Health Sciences degree and are eligible to re-interview the following year.

Magnetic resonance imaging uses a powerful magnetic field to create images. This powerful magnetic field will attract iron-containing objects and may cause them to move suddenly and with great force. Every magnetic resonance imaging facility has a comprehensive screening procedure and protocol to ensure patient, student and staff safety. Prior to attending clinics, a magnetic resonance imaging screening form will be supplied to students accepted into the program and must be returned to program faculty PRIOR to beginning clinics.

The Volunteer State Community College Radiologic Technology Program has revised its policy, effective August 2016, regarding the placement of students in mammography clinical rotations to observe and/or perform breast imaging. (Additionally, the policy may be applied to any imaging procedures performed by professionals who are of the opposite gender of the patient.)

Under the revised policy, all students, male and female, will be offered the opportunity to participate in mammography clinical rotations. The program will make every effort to place a male student in a mammography clinical rotation if requested; however, the program is not able to override clinical setting policies that restrict clinical experiences in mammography to female students. Male students are advised that placement in a mammography rotation is not guaranteed and is subject to the availability of a clinical setting that allows males to participate in mammographic imaging procedures. The program will not deny female students the opportunity to participate in mammography rotations if clinical settings are not available to provide the same opportunity to male students.

sound rationale presented in a position statement on student mammography clinical rotations adopted by the Board of Directors of the Joint Review Committee on Education in Radiologic Technology (JRCERT)

policy and is also available on the JRCERT Web site, <a href="www.jrcert.org">www.jrcert.org</a>, Programs & Faculty, Program Resources.
